EDUCATION

B.Tech Electrical & Electronics Engineering | Vellore Institute of Technology

September 2022 - July 2026

TECHNICAL SKILLS

- **Tools:** AWS, Kubernetes, Terraform, Linux, Bash, Docker, Jenkins, GitLab, Ansible, Grafana, Prometheus, GitHub Actions, Nginx, Traefik
- **Programming:** Javascript, Typescript, SQL, Python, Golang, YAML
- **Frameworks and Libraries:** NextJS, React, Express, NestJS
- **Courses:** Computer Networks

PROFESSIONAL EXPERIENCE

Educational Intern | CreditNirvana

Dec. 2025 - Present

- Managed and optimized AWS infrastructure spanning **30+ AWS accounts**, including **170+ EC2 instances**, **58 EKS clusters**, **75+ RDS instances**, and **60+ VPCs**, ensuring platform reliability, security compliance, and operational efficiency.
- Managed and scaled production infrastructure by maintaining **Kubernetes manifests** and environment configurations within an existing **Terraform**-based architecture.
- Designed and implemented automated configuration management and server patching workflows across Linux and Windows environments using **Ansible** and **Semaphore UI**.
- Built and maintained observability solutions using **Grafana**, **Prometheus**, **CloudWatch**, and **Grafana Alloy**, improving monitoring, log aggregation, incident response, and infrastructure cost optimization through resource utilization analysis.
- Administered and troubleshot **Amazon EKS** clusters, supporting application deployments, add-on upgrades, Kubernetes networking, and production workload reliability.
- Deployed and managed self-hosted **GitLab CE** and **Jenkins** platforms while supporting **Docker**-based application delivery, VPN provisioning, RDS administration, snapshot-based database restoration, and cross-account database migrations.

Tech Head | XLANCR Infotech (College Startup)

Oct. 2023 - Aug. 2025

- Built and maintained the company's services and **websites (including Backends)** with **Typescript**, focusing on speed, scalability, and a smooth user experience.
- Managed the company's Infrastructure and cloud ecosystem—covering **Gsuite**, **DNS**, **testing/production environments**, and **all servers**.
- Built reliable **CI/CD pipelines** and deployed containerized services using **Docker**, including GitHub Actions runners, Huly, NextCloud, SonarQube, and other internal productivity tools.

Freelance Engineer | Stravah

Nov. 2024 - Feb. 2025

- Developed and maintained the **frontend** of the company's main app, creating a responsive and intuitive interface.
- Managed key IT operations such as **Gsuite setup**, **DNS management**, and **AWS administration**.
- Maintained stable testing and production environments to ensure smooth and reliable application performance.
- Built **automated CI/CD pipelines** to speed up development and deployment cycles.

PROJECTS

Twitch Bot

Personal Project

September 2025

[Project Link](#)

- Built a real-time **Twitch chat bot in Go** integrating **Twitch IRC**, **Helix API**, and **Riot Games API** to deliver live League of Legends stats via chat commands

- Implemented automated **OAuth token refresh** (50-minute cycle) for uninterrupted API access
- Developed a **JSON-based caching system** for player data and champion mappings to reduce API calls and improve latency
- Added an **anti-spam system** with per-command cooldowns and normalized input (**case-insensitive**, ASCII-only)
- Built **dynamic API endpoints** for live match data: rank/LP, session stats, and active-game info (banned champions)

HTTP on TCP

Personal Project

September 2025

[Project Link](#)

- Built an **HTTP/1.1 parser in Go** that processes **raw TCP streams**, implementing **RFC 7230**-compliant header validation and incremental parsing
- Designed a **4-state finite state machine** (Init, Headers, Body, Done) with **Content-Length**-based body extraction and case-insensitive header handling
- Implemented **streaming parsing** to handle arbitrary packet sizes without blocking
- Wrote **comprehensive unit tests** for malformed headers, incomplete requests, and variable chunk sizes using **testify**
