

# PRANAV MATANHELIA

Cloud & DevOps Engineer

73, Macandruganj, Pratapgarh, Uttar Pradesh - 230001, India

+918840315092   [✉ pranavmatanhelia24@gmail.com](mailto:pranavmatanhelia24@gmail.com)   [in /pranavmatanhelia](https://www.linkedin.com/in/pranavmatanhelia)   [G /Thelethalghost](https://github.com/Thelethalghost)

## EDUCATION

**B.Tech Electrical & Electronics Engineering** | Vellore Institute of Technology

September 2022 - July 2026

## TECHNICAL SKILLS

- **Tools:** AWS, Kubernetes, Terraform, Linux, Bash, Docker, Jenkins, GitLab, Ansible, Grafana, Prometheus, GitHub Actions, Nginx, Traefik
- **Programming:** Javascript, Typescript, SQL, Python, Golang, YAML
- **Frameworks and Libraries:** NextJS, React, Express, NestJS
- **Courses:** Computer Networks

## PROFESSIONAL EXPERIENCE

**DevOps Engineer** | CreditNirvana

July 2026 - Present

- Led end-to-end production deployment for a client, provisioning and configuring AWS and Kubernetes infrastructure and ensuring production readiness across networking, compute, security, and application workloads.
- Strengthened cloud security across multiple VAPT audits by remediating infrastructure and Kubernetes vulnerabilities, implementing Content Security Policy (CSP), and addressing AWS Security Hub CSPM findings.
- Standardized EKS infrastructure by migrating Kubernetes cluster manifests and environment configurations to Terraform, enabling centralized and reusable management of deployments, variables, and application properties.
- Designed and deployed application and infrastructure observability using **Prometheus, Grafana, Grafana Alloy, and OpenObserve**, implementing metrics, centralized logging, and alerting to improve production troubleshooting and visibility.
- Designed and provisioned a dedicated performance testing environment for load testing, enabling systematic evaluation of application performance and infrastructure capacity under varying workloads.

**Engineering DevOps Intern** | CreditNirvana

Dec. 2025 - Jun. 2026

- Managed and optimized AWS infrastructure across **30+ AWS accounts**, including **170+ EC2 instances, 58 EKS clusters, 75+ RDS instances, and 60+ VPCs**, ensuring platform reliability, security compliance, and operational efficiency.
- Strengthened AWS security and compliance by enabling **VPC Flow Logs**, VPC endpoints, EBS encryption, Aurora PostgreSQL audit logging, IAM credential rotation, and cross-account access cleanup, while collecting **Security Hub CSPM** evidence for audits.
- Administered and troubleshoot **Amazon EKS** clusters, working with IRSA, AWS Load Balancer Controller IAM configuration, Kubernetes security contexts, access entries, node auto-repair, add-on upgrades, and production workload reliability.
- Built and maintained observability infrastructure using **Grafana, Prometheus, Grafana Alloy, Loki, and CloudWatch**, implementing log shipping, alert routing, and infrastructure monitoring while analyzing resource utilization for cost optimization.
- Automated infrastructure operations across multiple AWS accounts using **Ansible, Semaphore UI, Bash, and jq**, including server patching, cloud resource inventory, and idempotent networking automation.
- Managed production database and application infrastructure, including **Oracle RDS point-in-time restores, cross-VPC database migrations, Liquibase migration troubleshooting, Keycloak configuration**, and self-hosted **GitLab CE, Jenkins, and Docker** environments.

**Tech Head** | XLANCR Infotech (College Startup)

Oct. 2023 - Aug. 2025

- Built and maintained the company's services and **web applications and backends** using **TypeScript**, focusing on scalability, performance, and reliability.
- Managed the company's infrastructure and cloud ecosystem, including **Google Workspace, DNS, testing/production environments, and servers**.

- Built **CI/CD pipelines** and deployed containerized services using **Docker**, including GitHub Actions runners, Huly, NextCloud, SonarQube, and internal productivity tools.

## Freelance Engineer | Stravah

Nov. 2024 - Feb. 2025

- Developed and maintained the **frontend** of the company's main application, creating responsive and intuitive user interfaces.
- Managed key IT operations including **Google Workspace, DNS, and AWS administration**.
- Maintained stable testing and production environments to ensure reliable application performance.
- Built **automated CI/CD pipelines** to streamline development and deployment workflows.

## PROJECTS

---

### Twitch Bot

*Personal Project*

September 2025

[Project Link](#)

- Built a real-time **Twitch chat bot in Go** integrating **Twitch IRC, Helix API, and Riot Games API** to deliver live League of Legends stats via chat commands
- Implemented automated **OAuth token refresh** (50-minute cycle) for uninterrupted API access
- Developed a **JSON-based caching system** for player data and champion mappings to reduce API calls and improve latency
- Added an **anti-spam system** with per-command cooldowns and normalized input (**case-insensitive, ASCII-only**)
- Built **dynamic API endpoints** for live match data: rank/LP, session stats, and active-game info (banned champions)

### HTTP on TCP

*Personal Project*

September 2025

[Project Link](#)

- Built an **HTTP/1.1 parser in Go** that processes **raw TCP streams**, implementing **RFC 7230**-compliant header validation and incremental parsing
- Designed a **4-state finite state machine** (Init, Headers, Body, Done) with **Content-Length**-based body extraction and case-insensitive header handling
- Implemented **streaming parsing** to handle arbitrary packet sizes without blocking
- Wrote **comprehensive unit tests** for malformed headers, incomplete requests, and variable chunk sizes using **testify**
